

The Duravit logo is located in the top right corner of the image. It consists of a blue stylized 'D' icon followed by the word 'DURAVIT' in a blue, sans-serif font.The image shows a modern bathroom with a white bathtub on a black stand, a sink on a black vanity, and a large window overlooking a city at night. The lighting is dim and modern, with pendant lights and a backlit mirror. The overall aesthetic is clean and contemporary.

Duravit India Plant

State of an art facility – Completely subsidiary of Duravit AG
Established in 2010 at Tarapur, Gujrat.
Current production : 2,50,000 pcs /Annum

Duravit Ceramics manufacturing process highlights

Body and glaze Raw material – The basic ceramic mass is manufactured using natural raw material which is imported in India.

Colour consistency – Single colour across the world – No colour variation-No colour grades for project products

Glaze thickness – 0.8 to 1 mm – Abrasion grade-III (> 600 cycles)

The most important factors in Ceramic manufacturing

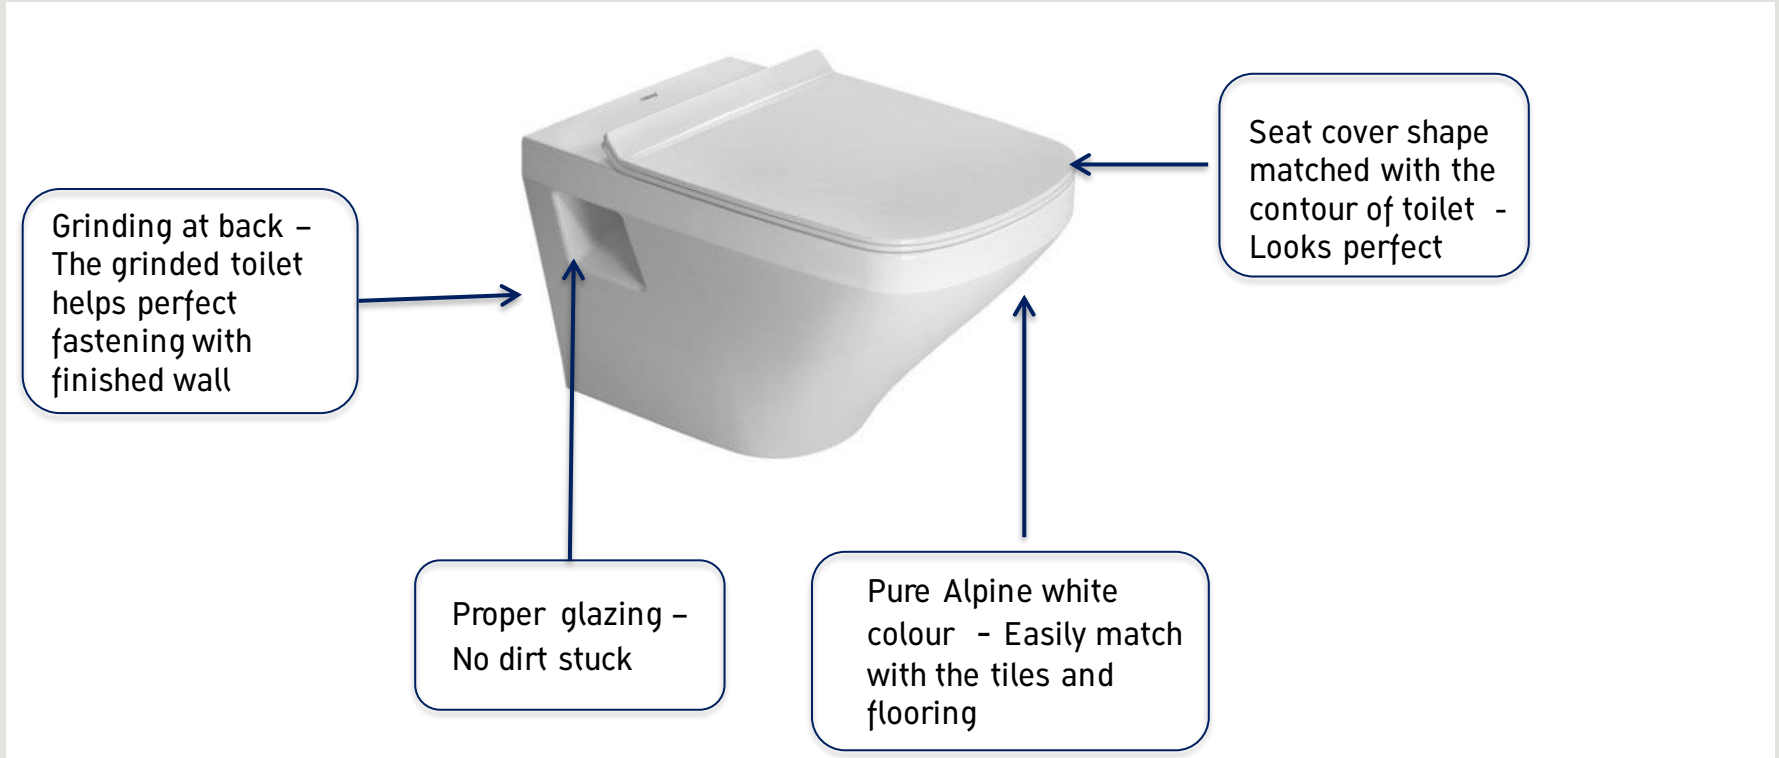

Furnace temperature – 1280°C

Dimensional accuracy – As per International standards

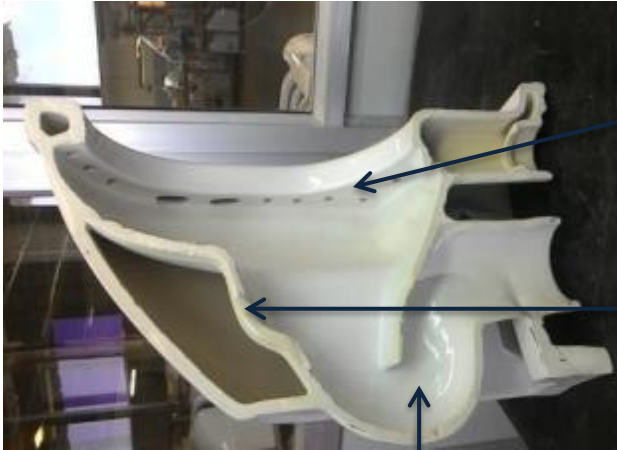

Functional tests – As per EN 997 (Test certificates available)

Load test – As per EN 997 (Test certificates available)

Toilet features : Aesthetic

Toilet features : Functional

Box rim holes - Perfectly crafted - Water comes with pressure, Clean bowl

Curve given for flushing with 4.5 litres of water

Fully glazed trap : Waste flushes easily, no smell

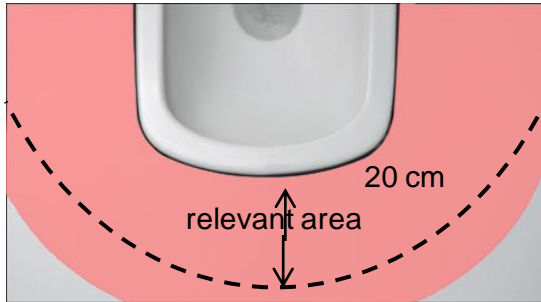

BETTER PERFORMANCE THAN OPEN RIM TOILET

DO YOU LIKE BAD SMELLING BATHROOM SPACES?

Solid Object Tests with Balls:

Flushing down 100 plastic balls (2cm Diameter) with a defined density. Max. 10 balls are allowed to remain in the bowl.

Splashing Test (DIN):

For the new **Rimless®-Technology** it is tested if water splashes beyond the toilet rim. According to the norm, paper is placed around the toilet (20cm projection). „Only a few small splashes are allowed“

WC Tests

Water exchange: how effectively does water get exchanged during the flushing process.

With 30 ml testing fluid it is tested that 99% of the coloured water is exchanged during the following flushing process. This means the toilet works effectively and flushes hygienically.

Flushing of the inner bowl: 20g sawdust is spread in the inner toilet bowl. Less than 50 cm² can remain unflushed. (Duravit internally: less than 20cm²)

WC Tests

Post-Flush-Water Test:

How much water is actually needed to fully clean the WC?

After the last test object left the siphon, the post-flush amount of water should be minimum 2.8 l

Pipeline Test (only for syphonic toilets):

The ceramic needs to be flushed with flushing only once. In addition to that, Duravit tests if an 18 m long horizontal tube (2° inclination) gets flushed completely.

Duravit Rimless® - Innovative and effective

- The Duravit Rimless® technology enables a hygienic, open rim design and at the same time an innovative and efficient water flow.
- This results in a dynamic, powerful water flow that rinses the entire inner surface, even with small amounts of water.
- The easily accessible edge area is therefore particularly easy to clean.

Option A

- Cleaning of tight, slim back part?
- Possibly over-splashing?
- Cleaning/rinsing thoroughly of complete inner bowl?

Option B

- Ceramic Water distribution tool
- For cleaning it has to remove !!
Hygienic ?
- Over splashing?
- Cleaning possible in this area ?
- Small hole for water outlet

Option C

- Small hole sufficient enough to really flush the siphon area?!
- 3 outlet/openings, partly tight and small → difficult to clean?! (especially in combination with grey water...?!)
- Too many edges/corners for easy cleaning?!

Option D

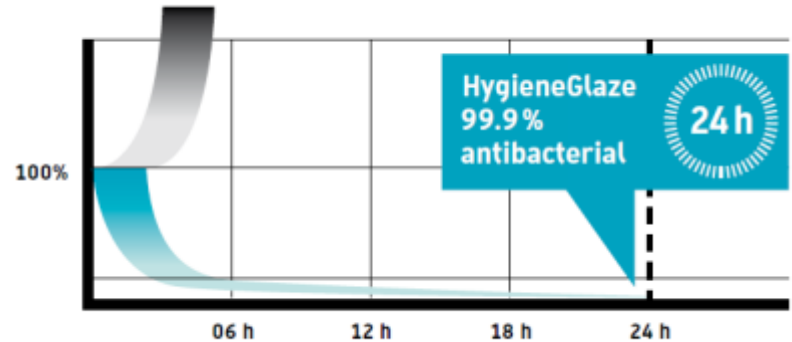

- Hole above water level?!
- Glazed?
- Design? - Asymmetric holes

HygieneGlaze 2.0

- Hygiene Glaze 2.0 inhibits the growth of bacteria
- Integrated into the glaze and fired into the ceramics permanently .
- Duravit's HygieneGlaze 2.0 sets an unprecedented hygiene standard.
- After just six hours, 90% of the bacteria (such as Escherichia coli) is killed.
- After 24 hours, 99.999% of the bacteria have been eliminated; an unprecedented level.
- Available in all Toilets

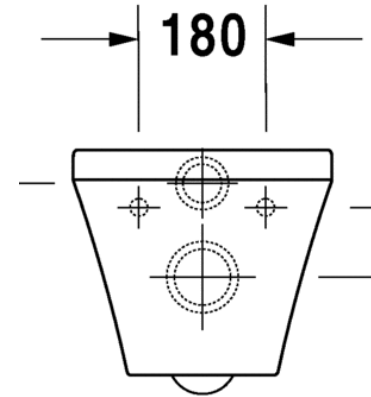

Toilet features : Installation

**CLOSED SIDES
INVISIBLE FIXING
SMOOTH CERAMIC
SURFACE EVERYWHERE**

**Installation with Durafix

DISTANCE FOR ALL
WALL HUNG TOILETS –
ABSOLUTE FREEDOM**

Duroplast seat covers

- Very high strength
- Comfortable sitting
- Durable
- Anti-Static
- Resistant against UV-light, stains, scratches, cigarette burns

TAKEN
OFF

- High grade hinges
- Can be removed with just one movement
- Convenient cleaning

UF Seat covers in all Wc

Dampers are developed and tested for [50,000](#) cycles

Imported seat covers from very reputed manufacturer

In built jet toilets

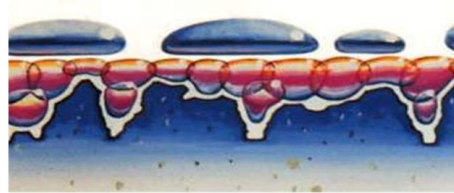

- Easy cleaning
- Maintenance free
- Durable
- Unique design
- Nozzle adjustable
- Brass adapter with plastic coating - No rusting
- Available in selected models

WonderGliss

Without WonderGliss

With WonderGliss

WonderGliss

- Finish burned onto the surface
- Easy cleaning of surface
- Does not provide contact surface for dirt, limescale etc.
- Less deposit – less cleaning

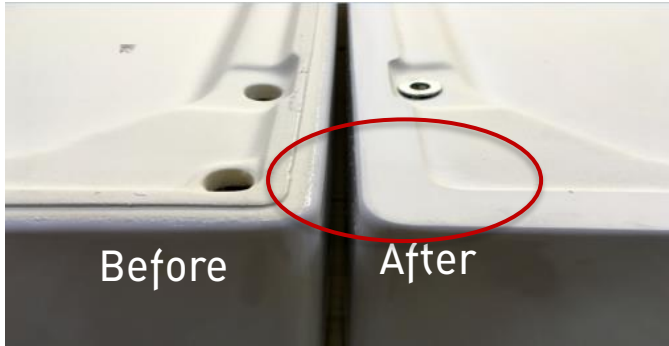

DuraCeram- Material of Future

- 5 mm thick edges
- Extreme Accuracy
- High Strength
- Elegant finish
- More dimensional stability
- Slim and strong with finer forms

Diamond ground Ceramics

Benefits:

- Results in extremely flat, smooth surface
- Lines up precisely with counterpart (furniture / wall)
- No unaesthetic silicon joint to „straighten“ the basin
